

WPC/ETA

Products with radio and/or wireless functionalities which are imported or manufactured and marketed in India must have an equipment type approval (ETA) certificate from the Wireless Planning and Coordination (WPC) wing of the Ministry of Communications of the government of India. This includes products with Bluetooth, wireless local area network access technology (Wi Fi), small digital radios (Zigbee), and radio frequency identification (RFID) among others.

We assist in testing such products as per the European Telecommunications Standards Institute (ETSI, Europe) and Federal Communications Commission (FCC, US) standards. Our authorized agents connect applicants with local representative support and assist them in obtaining ETA certification. We support you in completing the required documentation for filing an application at the WPC.

Product Scope

Mandatory requirements for all wireless products (transceivers, transmitters and receivers) entering the Indian market. Note: only receivers do not need approval, for example GPS products.

Product examples: wireless bluetooth watches, wireless water heaters, wireless home appliances, wireless car radio, radio frequency identification (RFID) tags and readers, wireless medical products used for patient profiling laptops, mobile phones, wireless mouse and keypads, remote key fob entry, wireless headphones and/or earplugs, wireless music players, wireless remotes, and any other radio frequency modules

1. We Can Handle The Following
Equipment Type Approvals.
Import License.
Dealer Possession License.
Frequency Allocation
